DETAILED ACTION

1. Claims 1-22 and 40 are pending with claims 7-9 and 13-15 withdrawn from consideration.

2. Response filed 07/13/2007 has been received and considered.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 40 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 40

- relates to a computer readable medium containing computer program code. The specification states that the computer readable medium can be carrier waves (see page 18 lines 7-9). Claims relating to signals are ineligible for patent protection because they do not fall within any of the four statutory
- classes of 35 USC 101 as they lack the necessary physical articles or objects to constitute a machine or a manufacture within the meaning of 35 USC \$101. They are clearly not a series of steps or acts to be a process not are they a combination of chemical compounds to be a composition of matter.
- 25 They are, at best, functional descriptive material per se.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

5 A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 5. Claims 1-6, 16, 20-22, and 40 are rejected under 35
 U.S.C. 102(a) as being anticipated by Adobe Acrobat 5.0 (as evidenced by "Adobe Acrobat 5.0 Classroom in a Book") (herein after Adobe).
- As per claims 1, 16, and 40, Adobe discloses method for restricting use of a clipboard application in a multi-application computing environment a) receiving a copy selection associated with designated content of a source file being displayed by a source application (see page 3); b) determining whether the source file is a secured file (see page 2, where requiring a password to access a document makes it secure), where the secured file cannot be accessed without a priori knowledge (see pages 2 and 3 where the password is required to access the file); c) preventing subsequent usage of the designated content in a destination application via the clipboard application when said determining determines that the

source file is a secured file (see pages 2 and 3 where the check box for "No Content Copying or Extraction, Disable Accessibility" prevents the content from being copied to the clipboard).

As per claims 2-4, Adobe discloses receiving a paste selection to provide the designated content to the destination application (see pages 2 and 3 where copying and pasting between applications are performed in applications running in an operating system).

As per claims 5-6 and 21-22, Adobe discloses said determining operates to determine that the source file is a secured file based on security information provided by the source application (see pages 2 and 3).

As per claim 20, Adobe discloses permitting storage of the designated content to the clipboard application when the determining determines that the source file is not a secured file (see pages 2 and 3 where copying and pasting works as normal when copying is allowed).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. Claims 10-12 and 17-19 rejected under 35 U.S.C. 103(a) as
10 being unpatentable over Adobe as applied to claims 1 and 16
above, and further in view of Blank et al. (US 20030037253).

As per claims 10, 17, and 18, Adobe fails to disclose storing alternate content to the clipboard application in place of the designated content when said determining determines that the source file is a secured file.

However, Blank et al. teaches such a copying and pasting technique (see paragraph [0046]).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to store alternate content in the clipboard when the course file is a secure file.

Motivation to do so would have been control the degree of access the public has to data (see paragraph [0007]).

As per claims 11-12 and 19-20, the modified Adobe and Blank et al. system discloses storing the designated content to the clipboard application when said determining determines that the source file is not a secured file (see Adobe pages 2 and 3 where copying and pasting works as normal when copying is allowed).

Response to Arguments

8. Applicant's arguments with respect to claims 1-6, 10-12, 16-22, and 40 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Adobe Acrobat Security Settings displays is more detail the application of security settings in Acrobat 7.0.
